SCC80TH ANNUAL SCIENTIFIC MEETING & SHOWCASE
DECEMBER 1 - 2, 2026 | JW MARRIOTT LA LIVE LOS ANGELES, CA

Amino Ester Technologies for Elevated Skin Sensory and Weightless Hair Conditioning

Inolex

www.inolex.com

PRODUCT/SERVICE BACKGROUND INFORMATION

Consumers increasingly expect personal care products to deliver more than basic function. Skin care must combine premium, lightweight sensory with visible benefits and longer-lasting experiences, while hair care must provide softness, manageability, curl definition and frizz control without heaviness or buildup. These demands are driving interest in multifunctional, naturally derived technologies that support modern performance across skin, scalp and hair.

WHAT IS THE COMPANY INTRODUCING TO THE MARKET/INDUSTRY?

Inolex is introducing two application-specific amino ester technologies: SustOleo™ Embrace for skin care, body care and fragrance, and ProCondition™ Satin for scalp-to-strand hair care. SustOleo Embrace delivers luxurious glide, soft cushion, visible skin refinement and extended fragrance delivery. ProCondition Satin provides weightless softness, curl and wave definition, humidity-resistant frizz control and a scalp-conscious sensory profile.

HOW WILL THIS NEW PRODUCT/SERVICE IMPACT THE INDUSTRY (BENEFITS)?

Together, these technologies expand the formulator's toolkit for creating naturally derived products with consumer-perceivable benefits. SustOleo Embrace combines sensory enhancement, immediate skin refinement and fragrance longevity in one ingredient, helping simplify silicone-free skin and body formulations. ProCondition Satin enables lightweight conditioning across rinse-off and leave-on formats, with targeted performance on curls and waves. The platform unites sustainability, elegant aesthetics and measurable performance from skin to scalp to strand.
