

Sisterna EZ Base: the unique, all-in-one emulsifying blend

Sisterna B.V.

www.sisterna.com

PRODUCT/SERVICE BACKGROUND INFORMATION

Sisterna manufactures sucrose ester emulsifiers which have excellent extra benefits such as mildness, skin moisturization and providing a gentle skin feel. They are natural ingredients with an outstanding technological performance. Using sucrose esters gives you a great flexibility in the development of cosmetic products with various textures and viscosities.

WHAT IS THE COMPANY INTRODUCING TO THE MARKET/INDUSTRY?

Our latest innovation is **Sisterna EZ Base**: a unique, all-in-one synergistic emulsifying blend. It is a 100% natural ingredient, based on sucrose esters, fatty alcohols and hydrocolloids, enabling a better performance than all ingredients individually. Its composition enables the creation of a wide range of textures using a single ingredient for emulsification and stabilization. It greatly reduces the development time, production complexity with numerous (powder) ingredients and sourcing efforts.

HOW WILL THIS NEW PRODUCT/SERVICE IMPACT THE INDUSTRY (BENEFITS)?

Sisterna EZ Base allows formulators to quickly and easily develop everything from fluid emulsions, to high viscous creams and to rich butters while maintaining the light sensory profile, skin moisturization and mildness that characterizes Sisterna sucrose esters. **Sisterna EZ Base** can be added to a hot water phase or emulsions can be made with a hot one-pot process to speed up the production time. It is a time-saving ingredient that makes the development process easy.
